Change Log for ChemDecide 2014

This document outlines the latest updates and bug fixes in ChemDecide 2014. All of the changes were made due to requests from members using the previous version. Please direct any feedback to Richard Hodgett (<u>richard.hodgett@britest.co.uk</u>) and future requests to the <u>ChemDecide discussion forum</u>.

Version 2014.1

Updates

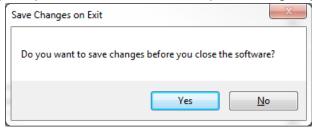

• Added the ability to keep the selected analysis chart when generating a report (either view by criteria or view by alternatives).

• The user is now prompted to save their work upon exiting any of the software.

• The user can now add a description to each alternative in decision setup. The descriptions are shown in any generated reports.

Decision Setup	
List all the possible alte	ative decision outcomes. rnative outcomes of the decision, ensuring that all of your alternatives are viable options.
c.g. II you are selecting	between chemical routes, ensure each alternative is a viable route to the desired product. Alternative Name: Add name here

윤 Modify Item	Remove Item need help?

• The source code in Decision Setup has been optimised which will increase performance and reduce file size.

Bug Fixes

• In AHP the slider descriptions now update when opening a new file. Previously they reset to "Equal".

												Strongly Better					

• The 'no information has been entered' has been removed from the reports.

• When generating a report with a maximised application window the results and analysis charts are now sized correctly.
